Answers to all your generator questions

Sumter Electric Cooperative (SECO) has added a new vidcast to its library of informative videos. The latest addition deals with portable and standby generators. It will help anyone who is considering buying a generator in making an informed decision on what to buy and how to utilize it to best advantage.

SECO Director of Corporate Communications Barry Bowman said, “Any of us who have lived in Florida for any period of time know that storms are simply a part of life here on the peninsula. At SECO we are very proud of the extremely high reliability of our electric system and our quick response when outages do happen to occur. However, many folks in Florida have purchased or are thinking about purchasing some type of generator as added insurance against the potential of outages that might last several days as a result of a major tropical storm, hurricane or tornado.”

“The new nine minute video,” continued Bowman, “is a public service for all Florida residents. It discusses how to purchase a generator to fit your needs, how to connect it safely and the hazards associated with operating a generator.”

He noted that the video can be seen on the SECO Website www.secoenergy.com and on SECO’s YouTube space, as well as on SECO’s Facebook page. “The content is helpful info for all Floridians and well worth a look. It could also save some lives,” he concluded.

SECO, itself, serves over 170,000 member/customers in a 2,000 square mile service territory spanning seven different counties in central Florida.
